

A Home That Feels Connected

A Practical Guide to Custom Cabinetry, Wall Paneling & Room Joinery | VSME Foshan

When a home is carefully planned, you notice it right away. The kitchen island invites people to linger, clothes and accessories have intuitive resting places in the wardrobe, and wall finishes flow gently from one room to the next without jarring contrasts. This guide shares our perspective on making custom joinery comfortable, beautiful, and straightforward to plan, directly from our workshop in Foshan.

CUSTOM KITCHENS / WARDROBES / WHOLE-HOME INTERIORS

1. Designing Around Everyday Habits

Foshan Moyisi Home Furnishings Co., Ltd. (operating as VSME and Moyisi) brings together a team of experienced joinery detailers in Lecong, Shunde, and a dedicated 14,000 square meter production workshop in Foshan, Guangdong.

Rather than manufacturing rigid, pre-boxed units, every cabinet run, island, and wall accent is shaped around your specific floor plan, your daily morning routines, and the appliances you love using.

Whether you are remodeling a single kitchen or outfitting an entire new residence, we set our baseline order at USD 5,000. That allows individual homeowners, interior designers, and independent builders to enjoy personalized factory manufacturing without requiring large commercial volumes.

14,000 m2	USD 5,000	35-45 days
Foshan factory	Minimum order value	Production after drawings

The order minimum is not a whole-home package price. Shipping and local installation are planned separately.

2. Kitchens Made for Cooking, Gathering & Entertaining

The modern kitchen is never just a culinary workshop - it is where family members start their day, friends lean in for a glass of wine, and weekend homework gets finished. We focus heavily on everyday flow: easy access between refrigerator, sink, and cooktop, with generous counter spaces for real prep work.

Our rounded islands offer soft, child-friendly corners and casual breakfast seating, while full-height larders keep pantry items organized behind clean matte lacquer or textured veneer fronts.

Internal drawer dividers, under-cabinet lighting channels, and appliance recesses are confirmed with you during the layout stage, ensuring your countertops stay peaceful and uncluttered.

3. Dressing Rooms & Wardrobes That Start Your Day Calmly

A great wardrobe makes getting dressed feel effortless. Instead of stacking garments in deep, hard-to-see compartments, we arrange storage by how you actually organize your clothing.

From double-height hanging rails for seasonal coats to shallow, velvet-lined drawers for watches and jewelry, each zone has a dedicated purpose. Tinted glass doors with slim aluminum profiles keep dust away while displaying favorite pieces under warm ambient lighting.

If your room allows space for a central island, it becomes an intuitive spot to lay out accessories, pack for a weekend trip, or keep everyday essentials within arm's reach.

4. Bathrooms & Utility Spaces Built for Daily Moisture

Bathrooms and laundry rooms work harder than any other space in the home. Wet environments require moisture-resistant substrates, sealed edges, and hardware that moves smoothly despite daily humidity.

Our floating vanities free up floor area, creating a light, modern silhouette while providing organized pull-out drawers designed neatly around sink plumbing traps.

In laundry rooms, we integrate washers, dryers, and tall broom cabinets into unified joinery runs, keeping cleaning supplies and folded linens tucked behind continuous, easy-to-wipe cabinet fronts.

5. Bringing Walls, Doors & Cabinetry into One Palette

The transition between cabinetry and surrounding walls often gets overlooked during renovations. When TV consoles, hallway walls, and room entry doors are treated as one integrated concept, living spaces immediately feel more open and composed.

We manufacture feature wall panels in smooth wood veneers, soft-textured laminates, and vertical fluted slats that pair directly with your storage units. Concealed doors can sit completely flush with adjacent wall cladding, gently tucking away utility spaces or private bedrooms.

Because everything is finished and checked under one roof, sheen levels, edge reveals, and grain directions stay harmonious throughout your main living areas.

6. How We Work Together: From Rough Ideas to Your Home

Working directly with our Foshan team is designed to feel clear and collaborative, even from thousands of miles away:

Share Your Initial Idea: Send over your room sketches, floor plans, or inspiration pictures. Tell us what you love, what feels cluttered in your current home, and how you want each room to function.

Layout & Material Discussion: We review layout possibilities, discuss finish options suited to your budget and climate, and provide an initial itemized estimate so you can evaluate the numbers early.

Detailed Shop Drawings: Our detailing team drafts comprehensive CAD elevations and section drawings. Every cabinet width, filler trim, door swing, and internal drawer height is reviewed with you and confirmed before manufacturing begins.

Precision Production (35-45 Days): After your final sign-off, our Foshan factory begins cutting, edge-sealing, boring, and preliminary assembly testing. Production typically takes 35 to 45 days.

Protected Packing & Hand-off: Every cabinet component is wrapped in protective wrap, reinforced with impact-resistant edge protection, and boxed or crated for safe ocean freight to your destination. Local delivery and installation are handled by your preferred local contractors.

Ready to chat through your ideas? We would love to hear about your space. Reach our team directly by email at moyisi@vsmehome.com or connect via WhatsApp at +86-15994888037. Visit www.vsmehome.com to see more of our work.
